Software Engineering Diploma

- Admitted through Code to Career Program, scholarship valued at \$16,000
- Coursework: HTML, CSS, SASS, JavaScript, React, Node.js, MySQL

EXPERIENCE

Organimi

March 2026 – August 2026

Solutions Engineer

Toronto, ON

- Led **100+** technical discovery calls (4–5 per week) with enterprise, commercial, and SMB accounts, scoping **REST API** and webhook integrations and designing custom data schemas that mapped unstructured customer data into structured organizational hierarchies
- Owned a **global search feature** end-to-end: translated user research into requirements, defined scope with Product and Engineering, launched to production, and hosted a customer-facing technical webinar to drive adoption
- Reduced manual troubleshooting time by **15%** by replacing case-by-case triage with a root-cause diagnostic framework built from **100+** monthly Zendesk tickets and LogRocket session data
- Prioritized field feedback from customer conversations into a ranked set of product requirements, cutting rework between Product and Engineering

Salesforce

June 2024 – March 2026

GTM, Team Lead

Toronto, ON

- Identified **\$4.7M** in expansion ACV for Pharma accounts by driving technical qualification with Enterprise AEs, using usage-signal analysis to build the business case
- Promoted from GTM to Team Lead in August 2025; led a team of **8** and owned strategy and performance for the **#1 GTM team** in North America, building internal KPI-tracking tools and running regular strategy sessions to drive accountability
- Identified **churn risks** across a complex, regulated enterprise portfolio through data-driven health monitoring, protecting renewal revenue
- Resolved operational bottlenecks in regulated data deployments by driving **cross-functional** workstreams between Sales and Product

The Daebak Company

June 2023 – March 2024

Product Operations Analyst

Remote

- Drove a **10%** improvement in website conversion rates by prioritizing fixes surfaced through **SEO analysis and customer research**
- Coordinated cross-functional workflows between product, marketing, and operations to align on priorities and shorten initiative timelines

PROJECTS

Bookmate (React, Node.js, Express, MySQL) — Full-stack Tinder-style book matching app built as BrainStation capstone, with live API integration (GitHub)
